

The Light Cured Concept for French Pedicures, Permanent Polish and Toenail Reconstruction

A light curing material for the restoration and correction of toenails that contains anti-microbial agent Piroctone Olamine.

With over 15 years of research and manufacturing experience in the field of synthetic materials for fingernail cosmetics, LCN developed Pedique to be an elastic one-step system, which adapts to the foot's movements.

Pedique's adhesive qualities ensure secure adhesion, even to calloused skin. Pedique is ideally suited for protecting and sealing nail surfaces, leveling grooves and deformations, concealing discolourations, strengthening toenails and sealing ingrown toenail braces.

Pedique is available in various shades and is applied to the cleansed skin and/or oil free nail. It is hardened with a special UVA light unit.

Pediseal

The elastic, light-curing sealing gel for toenail cosmetics with UV-protection. Adjusts to the movement of the foot and is the ideal supplementary product for the highly elastic Pedique Plus. The gel can be easily applied even where it is difficult to treat furrows, it does not run into the sides of the nail. The UV-protection stabilizes the permanent french design and protects the coloured variants of the toenail modelling gel Pedique Plus against extreme exposure to sunlight.

1001-20671		5 ml
1001-20670		10 ml

Pedique Plus

Contains the antimicrobial agent Piroctone Olamine. This light cured resin with excellent bonding and flexibility is ideal for creating a beautiful French Pedicure look.
