

What Makes LCN Wax So Unique

- **Hard Wax** – Containing Azulene. Does not require strips and does not stick to the skin, reducing discomfort. Recommended for delicate areas such as bikini, underarms, or upper lip.
- **All Purpose or Azulene Wax** – Designed for coarser hair or oily and moist skin types. Azulene is added to help calm sensitive skin and to prevent redness.
- **Natural Cream or Tea Tree Wax** – These cream waxes are designed for finer hair and sensitive, dry/dehydrated skin types. Tea Tree is added as a natural antiseptic, aiding in prevention of ingrown hairs as well as facial and body break-outs.

Azulene:

Derivative of the Chamomile Plant that has anti-inflammatory and soothing properties.

Tea Tree:

Comes all the way from the Australian outback. It is derived from the leaves of the Melaleuca Alternifolia. Tea Tree oil is widely recognized for having antibacterial, anti-inflammatory, and antiseptic properties.

Advantage of Pine Resin?

- Pine Resin removes hair effectively, leaving the skin virtually “sticky” residue free.
- Lower risk of allergic reaction – pine resin is plant based.
- Lower risk of ingrown hairs, break-outs and infection – pine resin has no Glucose or Sucrose (sugar) base.
- Lower risk of redness and itching – pine resin is extracted from plants. Industrial honey, although refined, has been known to have trace elements of bee venom.
