BIO GLASS GEL

Solves lifting
problems!
100%
acid free!

Bio-Glass contains unique compounds that are compatible with the human body and work with the nail to avoid lifting. Decades of research have shown that bioactive glass offers high levels of biocompatibility, a feature that is especially helpful in cosmetics.

Bio-Glass creates a natural, secure bond to the natural nail and, because of its special inorganic composition, supports new nail growth. **Bio Glass improves adhesion without the use of acidic bonders**, allowing BGG to combine Bonding and Sculpting in one product and reduce damage to nails.

Application:

Apply BGG onto natural or artificial nail and sculpt it. Cure (2 minutes in a UV-unit or 60 seconds in a LED-unit). BGG comes in a delicate pastel shade and is suitable for all nail types. After removing the dispersion layer it appears matte. Seal it with a LCN sealant of your choice.

TAKE CARE OF YOUR CLIENT'S NAILS

The special ingredients Bio Glass, L-Cysteine and Chitosan support the regeneration of nails and can improve the nails' structure considerably.

- **L-Cysteine** is an amino acid and is the most important element of keratin. This ingredient is essential for healthy nail growth.
- **Chitosan** is a biopolymer of naturally occurring polyamino saccharides and has a proven antibacterial and fungicidal effect. It is especially beneficial to damaged nails.
